

FAQ: HELP! My Spring MVC Controller is not working. What to do?

Section 12, Lecture 102

JUST A HEADS UP ...

IN THE FOLLOWING VIDEOS YOUR SPRING MVC CONTROLLER CODE MAY NOT WORK

THIS IS AN ECLIPSE CACHING BUG

IF YOUR CONTROLLER DOESN'T WORK THEN TRY THE STEPS BELOW

BE SURE TO COME BACK TO THIS ARTICLE

Question:

HELP! My Spring MVC Controller is not working. What to do?

Answer

Debug Tip #1: Clear Cache

This is normally a caching issue with Eclipse.

Here are some steps to clear the Eclipse cache and Tomcat cache.

1. In the Server's tab in Eclipse, Stop the Tomcat server
2. Right-click the server and select "Clean..."
3. Right-click the server again and select "Clean Tomcat Work Directory..."

4. In the Eclipse, select the top-level menu option, Project > Clean ...
5. Be sure your project is selected and click Ok
6. Restart Eclipse

Retest your application. If you continue to have problems try Debug Tip #2

Debug Tip #2: Import the Project in a new workspace

1. Copy your project to a new directory on your computer like, c:\foobar

2. In Eclipse, open a new workspace. Create a new workspace in Eclipse:
